Ellepot papers attain VeriFlora approved input material status

Ellepot EP and VP papers have been designated as VeriFlora Approved Input Materials.

[Print this Story](#) [Add This](#) [Save to MyGMPro](#)

Two types of degradable papers used by Ellepot-USA in its cutting and seed propagation system have been listed as **VeriFlora Approved Input Materials**. The **Ellepot propagation system** offers an alternative to plastic containers with its EP or VP paper with reusable trays. The Ellepot is suitable for a variety of flowering and vegetable plants and other nursery products. One roll of paper is equivalent to about 17,000 4-inch pots. One pallet of paper holds 32 times that, or 540,000 pots, taking up much less space and weight on a pallet, allowing greater efficiency in transportation. The Ellepot reduces the amount of growing medium needed and avoids root shock when transplanting by keeping the medium secured around the root system.
