

# Easy Green

**Rice Hull pots, easy on the environment, easy for growers to automate and easy for consumers. The perfect solution for your customers who prefer sustainable packaging.**

Six sizes of solid Rice Hull pots are available. Solid pots are designed to degrade in home compost piles. NetPots, in three sizes, are specially formulated to degrade in the ground. They are plantable and biodegradable. Convenient for consumers and saves labor and waste for landscapers.

We make sustainable PLA corn-based filling trays to fit every size Rice Hull pot. They're strong and durable, yet light-weight. Perfectly engineered for automation. PLA trays are industrial compostable.

**NetPots hold up in production. Plantable NetPots encourage strong root growth.**

**VeriFlora Approved Input Material Manufacturer - PLA**

### Rice Hull Pots - Transforming Waste

All our Rice Hull pots are made from natural rice hull fibers, not the edible grain. Rice hulls are a bi-product of rice processing that would otherwise be wasted.

Batch testing ensures that the pots don't contain heavy metals or phytotoxic ingredients.

### NetPots™

NetPots are functionally designed with rigid sides. Holes and wide slots enable plant roots to penetrate into the soil while the pot decomposes. Specially formulated to degrade in the ground, NetPots are plantable, biodegradable and environmentally friendly.

Rice Hull Pots - truly sustainable products.

### Polylactic Acid (PLA) - Nature's Plastic

PLA Trays and Pots made from a renewable resource, field corn, easily replace products made from oil and natural gas - responsible innovation. During the transformation from corn to plastic pellets the greenhouse-gas neutral position further reduces fossil fuel use to a level more than 65% less than traditional plastics and the products are compatible with existing recycling systems, can be composted, land filled and incinerate cleanly.\*

PLA bio plastics - harvested, formulated and manufactured in the USA and converted by Summit Plastic Co.

### Green That Works and Delivers Seamless Change - Easy Green

Peace Tree Farm's AgriNomix production line proves automation works with rice pots - very well.

*"We worked and tweaked until we got the machine to dispense the rice pots flawlessly. We had this machine working better on rice pots than on plastic pots. We like the rice pots a lot - we use a variety of sizes. They're not really much more expensive than using a plastic pot and it sends a very clear message - much clearer than saying 'recycle your plastic.'"*

Lloyd Traven, Owner - Peace Tree Farm, Kintnersville, PA
